

A transformer includes first and second transformer windings formed on an iron core. The core and windings are disposed in an enclosure.

5           There are first and second electrical pins  
in electrical connection with the first transformer  
winding.           A second inner enclosure           made of fire  
retardant material encases a portion of the electrical  
pins           and the first transformer winding.           in  
10 connection with the electrical pins.
